Celsys, Inc.

Introducing the New AI “Pose Scanner” to Clip Studio Paint! Extract Poses from Photos and Apply to 3D Models

Celsys is pleased to announce the release of Clip Studio Paint Ver. 1.8.6, featuring the new Pose Scanner feature using AI technology. The Pose Scanner estimates poses from photos of people, then applies these to 3D models and 3D characters.

This update is free for existing users of Clip Studio Paint (Pro, Ex, and Debut), and will be available on Windows, macOS, and iPad versions as a technology preview feature.*

Clip Studio Paint includes poseable 3D drawing figures to help artists draw people in their art. Previously, artists could choose from preset poses or individually move the limbs and angle to adjust the pose. With the new Pose Scanner, they can now also use photos to create the pose they want. After applying a pose, the model can be moved to another angle for compositions that are different to the original photo.

The Pose Scanner joins the existing AI features “Colorize” and “Remove tone”. Celsys will continue to develop and introduce AI features to support creators through technology.

▼ Pose Scanner

The Pose Scanner uses AI technology to estimate poses from photos of people, then apply these to 3D models and 3D characters. On Windows and macOS versions, users can import images. On the iPad version, users can take photos and apply these poses in addition to using existing photos and pictures.
